

Expression of Interest (EOI) Re: Enhancement of the Smart Sugar
Cluster and Development of a digital marketplace for the
integration of BACSuF using Blockchain Technology

Contract #: #44/2025/GCF/BACSuF/Belize/CCCCC

EOI

2nd April 2025

Diagon Consulting Ltd

Vlinder Inc.

PwC

EOI Letter

16 Ruhee Street, Calcutta Road #2,
Freeport, Trinidad, W.I.
Telephone: (868) 786 7390

Date of this EOI submission: 2 April 2025

Contract #: #44/2025/GCF/BACSuF/Belize/CCCCC

To: Mr Colin A Young, Ph.D

We, Diagon Consulting Limited, a Trinidad registered company, Vlinder Inc, a US registered organization and PwC (Caribbean entity) are elated to acknowledge our deep interest to participate in the said consultancy.

This document (broken into parts for submission) details the profiles of all companies, our experience including our credentials/ projects as well as two relevant case studies.

Name of the Bidders:

Diagon Consulting Limited Vlinder PwC

Name of the person duly authorized to sign the Bid on behalf of the Bidders:

Chad Ramirez

Title of the person signing the Bid:

Director, Diagon Consulting Ltd.

Signature of the person named above as well as authorizing persons:

A handwritten signature in blue ink, appearing to be "Chad Ramirez", on a light blue background.

A handwritten signature in blue ink, appearing to be "Malini Srinivasan", on a light blue background.

Date signed

Malini Srinivasan for Vlinder inc

2nd April 2025

Directors: Chad Ramirez Nylah Ramirez

1.1. Executive Summary

Diagon, Vlinder and PwC are elated to participate in this Expression of Interest (EOI). The project includes many tenets that are core to all firms – ESG and biodiversity, financial inclusion, gender equality, economic development to name a few. Diagon and Vlinder have jointly participated in a few IDB funded projects including, a Parametric Insurance blockchain project through Compete Caribbean (provide insurance to the insured) , the development and implementation of a Work Permit system for the government of Jamaica as well as the Go-Green project for the Company office of Jamaica (CoJ) where we are implementing digital e-Certification on blockchain. Additionally, together with the Crooper Institute of Trinidad and Tobago and the Food and Agricultural Organisation (FAO) we have built a traceability as well as bio-diversity for farmers. **All** these solutions were built on the LACCHAIN platform. Furthermore, it should be noted, we are working with the Caribbean Examination Council (CXC) to troubleshoot a failed implementation of the e-Certification solution developed by another blockchain company. In the interim, the CXC is using Diagon/Vlinder eCertification solution.

PwC is a global consulting firm also with blockchain capabilities. Apart from the technical experience they bring to the team and the CCCCC, they have strong bench strength around governance, project management, framework development etc. The scope of the initiative is well crafted – it not only look at the technology (which is an enabler) it also includes governance, change management (social media strategy) etc. Diagon has teamed with PwC in other projects to great success.

Sugar cane directly accounts for approximately 4-5% of Belize's GDP, generating about \$76.2 million in economic output (2019). Historically, sugar has been more significant, averaging 7.8% of GDP over the past decade and reaching nearly 11% in the mid-1990s. The industry contributes 9-10% of Belize's total exports and generates 5-6% of the country's foreign exchange earnings. Employment impact is substantial, with 5,000 direct workers, 5,000 registered cane farmers, and approximately 40,000 people (13-15% of Belize's population) depending on the industry. It is therefore a very important for the economic progress and stability of Belize.

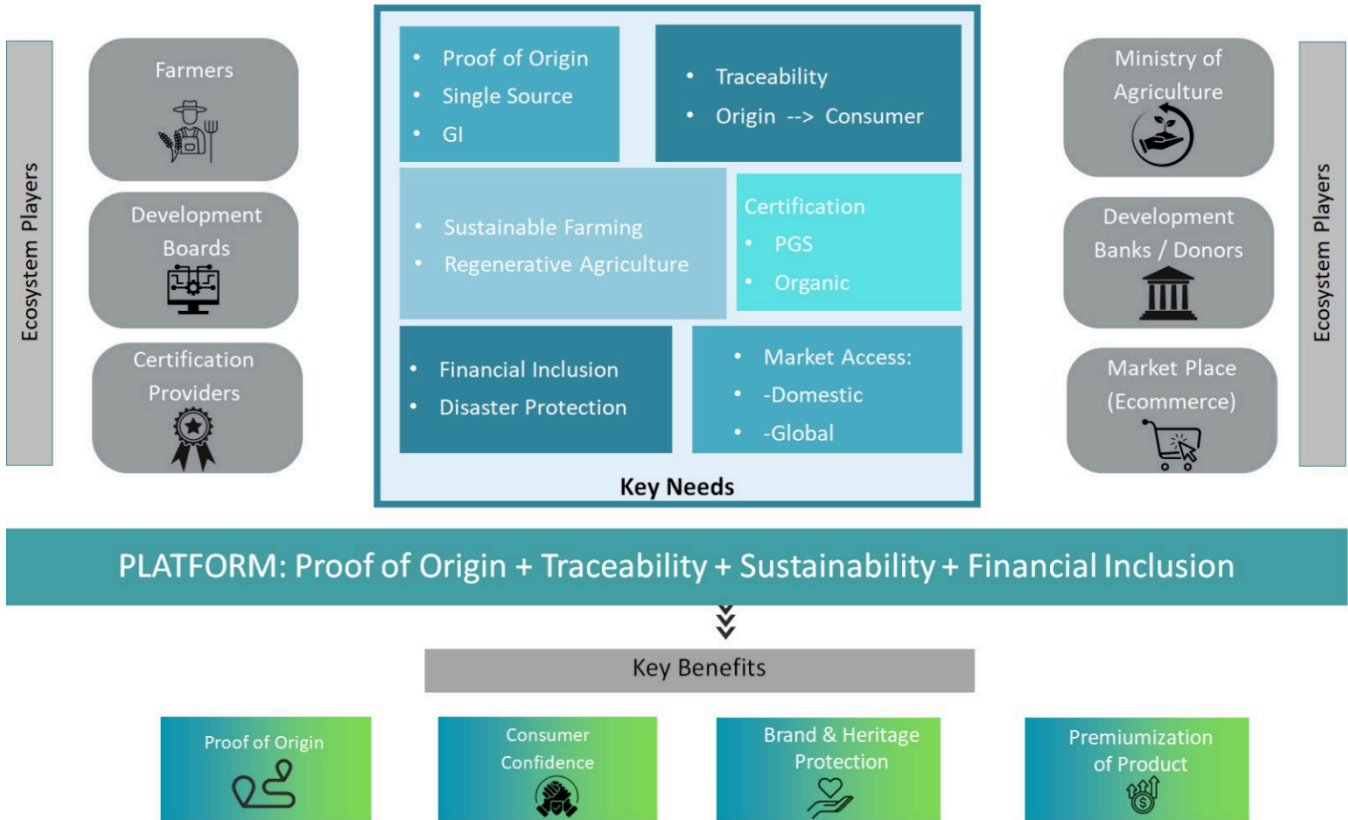

We never see projects like this as having a finite end – we will continue to work with you beyond the 34 months to ensure success. With the Parametric Insurance Project we teamed with the Climate Resilience Execution Agency of Dominica (CREAD), a non-for-profit organisation. We not only built the tech solution, but also developed social media content (videos etc), conducted townhalls and worked with two researchers from the various universities to study the project and its outcome. When CREAD was dissolved, we paid commission for the 2nd pilot and help bring a donor agency to assist in subsidising the premium payment in order to increase uptake. We have since extended the project to Grenada where in 2023 with Hurricane Beryl we made a payment of USD 1.5 to farmers.

From a big picture perspective, all three companies share a common vision on how services could be delivered to citizens especially the less privileged in society in a seamless, efficient and effective manner. We see the scope of this project beyond the terms and deliverables outlined in your Terms of Reference (TOR) with elements of bio-diversity, geolocation indicators for Belize's sugar cane, extended the offering to the banana and citrus producers, opening up of export markets (certification of produce – using the participatory guaranteed system (PGS) – that is used in parts of the Caribbean, India, Africa etc), providing parametric insurance to financial institutions to help cover bad debts re loans offered to farmers due to climate events etc.

This is not a technology project for us!!

We will use Agile methodologies to ensure the project meets the CCCCC objectives and the business objectives of the project are met (through agile means) as well as helping to challenge the status quo i.e. to shift paradigms as is required with disruptive technologies – digital transformation. Our team will include technology experts as well as bio-diversity SME, strong change managers, marketing and governance professionals.

See diagram below of the re the eco-system development for the Crooper Project.

1.2. Qualification Requirement

Requirement	Description	Response
Firm Experience	- At least 10 years of technical experience in IT consulting or developing business productivity solutions - Minimum of 2 similar assignments within the last 5 years (blockchain solutions for agriculture/manufacturing value chains in Latin America and Caribbean)	Diagon is just about 9 years old but eTel Technologies (part of the group is 23 years old). PWC exceed the 10 year threshold. We have presented more than 2 assignments – with the Crooper Foundation aligned perfectly with what the CCCCC is hoping to achieve.
Technical Competence	Demonstrate experience in developing blockchain and IT solutions for agriculture-based industries	See Crooper Foundation reference as well as Case study 1. Also done for Diageo, West Bengal Excise Department etc.
Familiarity	Demonstrate familiarity with LACChain blockchain network or similar platforms, and knowledge of sugarcane industry in developing countries like Belize	ALL but 2 the blockchain reference provided in our credentials section run on LACCHAIN – Diagon/Vlinder have nodes on LACCHAIN
Financial Capacity	Provide audited financial statements for the past 5 years	We have provided for Diagon Consulting (not eTel Technologies – this is private), vlinder and PWC. PWC financial strength is significant as well as Diagon other entities
Team Composition	Key experts required: IT Project Manager, Back-end Developer, Front-End Developer, IT & Software Architect, UX/UI Designer, IoT Expert	We have many full stack developers and IoT. We have provided a sample of CVs including a bio-diversity expert in agriculture
Language	Excellent oral and written communication skills in English	English is the natural language of most of team members from Diagon, Vlinder and PWC
Documentation	- Description of firm's background and organization - List of relevant projects demonstrating experience - Certificate of Registration or Incorporation - Information on current commitments	Firm background provided as well as certificate of incorporation of all firms. 2 case studies also provided as well as description of 8 other

		projects as well as client references from IDB/ITU), Crooper etc.
--	--	---

- Note: Include all required documentation to demonstrate qualification against the shortlisting criteria

1.3. Eligibility Criteria Table

Criteria	Description	Response
Country Eligibility	Firms from all countries are eligible to participate	Yes – firms are from Trinidad and the US
Government-owned Enterprises	May participate only if they can establish they are legally and financially autonomous, operate under commercial law, and are not dependent agencies of the Centre	Fully met/ compliant
Financial Status	Must not be bankrupt or wound up	Fully met. It should be mentioned that Diagon and vlinder fee structure in most cases are based on transaction fee – it is an annuity type of business
Professional Conduct	Must not have been convicted of an offense concerning their professional conduct	Fully met/ compliant
Professional Ethics	Must not be guilty of grave professional misconduct	Fully met/ compliant
Regulatory Compliance	Must be in compliance with payment of social security or taxes in their country of establishment	Fully met/ compliant – annual returns available
Sanctions Status	Must not be on sanctions lists of any organ of the United Nations, World Bank, or Project Sponsor	Fully met/ compliant
Standing with CCCCC	Must not be declared ineligible (suspended or sanctioned) by the Centre	Fully met/ compliant
Conflict of Interest	Must not have conflicts of interest, unfair advantage, or engage in prohibited practices	Fully met/ compliant
Disclosure Obligation	Bidders have an obligation to disclose any situation of actual or potential conflict	Fully met/ compliant – nothing to provide/ Not applicable,

1.4. Qualification Requirements Table (Scoring Criteria)

Criteria	Description	Maximum Score	Response
Technical Competence	Demonstrate technical competence in developing Blockchain and IT solutions for agriculture-based industries	30 points	Our credentials section details 8 blockchain projects. The Crooper Foundation and the Begal in India are agricultural related. The Parametric insurance is related to climate resiliency. We are also finalising a projects in the Eastern Caribbean around traceability of bananas.
Firm Experience	At least 10 years of technical experience in IT consulting or developing business productivity solutions	15 points	CVs of a few persons have been provided – some of team members (Diagon, Vlinder, PWC) have over 20 years of technical consulting and developing experience
Similar Assignments	Minimum of 2 similar assignments within the last 5 years (blockchain solutions for agriculture/manufacturing value chains in Latin America and Caribbean)	15 points	This has been provided- Crooper, West Bengal Excise Department. We also have Diageo using our system for traceability for their production line as well as the Parametric Insurance solution is Dominica/Grenada where farmers are the greatest beneficiary.
Sector and Local Experience	Demonstrate familiarity with LACChain blockchain network or similar platforms, and knowledge of sugarcane industry in developing countries like Belize	20 points	All but 2 of our reference run on LACCHAIN with Diagon/Vlinder having nodes on LACCHAIN. We have also included an agro expert. Trinidad is also a sugar cane growing country

Financial Capability	Provide audited financial statements for the past 5 years	10 points	We have provided for Diagon Consulting (not eTel Technologies – this is private), vlinder and PWC. PWC financial strength is significant as well as Diagon other entities. Diagon/vlinder operate a transaction fee model – so it is an annuity business in the main – revenue is spread over many years
Commitments/Ability to Mobilize	Demonstrate ability to mobilize for contract start based on existing commitments	10 points	There are always projects – however, at most a 1 month mobilisation is required by all 3 teams.
Total		100 points	

1.5. Company Profile, Capabilities and Competencies

Company Profile

1.5.1. About Diagon

Our Organization in a nutshell

- a) Trinidad registered organisation- 8 years. However, the team includes persons who have over 25 years of experience. Same with the vlinder team where Suresh Jagannathan and Malini Srinivasan both have 20+ years of experience. ***Diagon and vlinder together have been in existence for over 14+ years as firms***
- b) ***Part of eTel Technologies that has been in existence in Canada for over 23 years (See Cert of Incorporation below). However, for Caribbean entities we prefer to work under Diagon.***
- c) Team size: 15
- d) ISO 27001 certified
- e) Clients across the Caribbean and North America
- f) Have Security Operations Centre (SOC) in Trinidad
- g) Mobile Apps run on iOS and Android.
- h) Developed and own 3 system – Leave application, Field Service application and e-ticketing solution

Diagon Consulting is comprise of both a Digital Transformation and a Cybersecurity practice.

Digital Transformation: We are a consulting firm focused on enterprise automation through Blockchain, Robotic Process Automation (RPA), Business Process Management (BPM), Rapid Mobile Development, Internet of Things, Generative AI, Conversational AI and Intelligent Document Processing. We also offer world class notification systems.

Our partnerships with Vlinder, UiPath, AuraPortal, Inbenta and Abbyy coupled with our strong software development and process experience makes us well positioned to help clients derive cost reduction and process efficiencies throughout key phases of the Automation Architecture. We also assist with the development and deployment of advanced analytical models using the Microsoft suite of products. While our focus is on solutions, we also perform process review and architecture design – precursors for any successful implementation.

Diagon has been involved in major transformational projects including the building of a parametric insurance product, a simulation of a digital Caricom (Digital ID, e-passport etc.) as well as revolution of Trinidad Carnival. Diagon boast a very impressive list of clients as seen below.

Parametric Insurance Blockchain product offering in Dominica

CTU conference attended by regional PMs and Ministers- Diagon's Technologies

Digital Carnival

Diagon is also part of a group of companies under common ownership including eTEL Technologies <https://www.eteltech.com/> and SmartThought Technologies <https://www.smartthought.ca/>

Our Cybersecurity practice – we were the first to establish a physical Security Operations Centre (SOC) in the English speaking Caribbean

- Houses 30 Analyst
- Incident and breakout rooms
- Electrical and Internet failovers
- Green Building
- 24 hour physical security

Our Vision

- To provide cost reducing and efficiency derived process automation and analytical solutions to our clients in a secure manner.

Our Commitment to Our Clients

- An Agile approach that addresses business needs and delivers solutions speedily
- Leading technology solutions recognized by Gartner and Forrester
- Cost effective solutions suited to Caribbean companies with a strong return on investment (ROI)
- Customized demos and proof of concepts
- Maintaining continued support long after implementation

1.5.2 About Vlinder

Our Organization in a nutshell:

- a) NJ based, MWBE Certified with SAM.gov Registration.
- b) Team size: 42 (USA and India)
- c) Woman founder
- d) Three Platforms “live in market” including Digital Id + Credentials platform.
- e) Listed in multiple marketplaces including Microsoft (Cloud Native runs on Azure Cloud and Cloud)
- f) Mobile Apps run on iOS and Android.
- g) Various Awards and Recognitions across the world
- h) Alignment with Global Standards w3c, CTDL etc.

Our purpose of existence is to challenge status quo and solve unsolved problems using technology and bring tangible social benefits to the world. Our focus spans fighting gray market to enabling better technology/digital services to community (inclusion) to accelerating “World Economic Forum” sustainable development goals.

Trag : Authenticity and Traceability platform

Trag is a Blockchain-enabled Authenticity & Provenance Platform empowering Brands to narrate to counter fraud and track the Journey of their products from source to end consumers.

The platform

1. Proves Authenticity of the Product
2. Provides Transparent view of Product Journey (Origin to Customer).
3. Provides Persona based control to the Manufacturer to share extended information with inspectors.
4. Enables Real-time Customer Engagement by providing details of Product to customer & gathers near real-time feedback from customer
5. Enhances after-sale experience by automating warranty process & batch recall

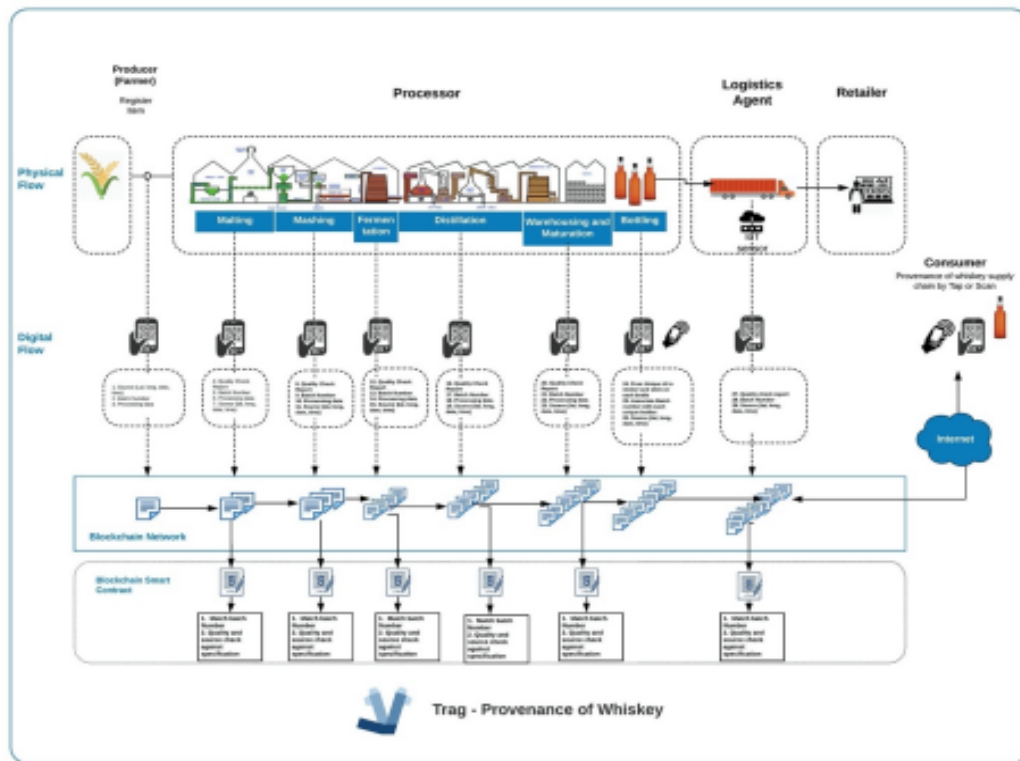

Benefits include:

1. Brand Protection & Brand Value Elevation
2. Elevated Customer Experience (Millennials and Gen-Z)
3. Increased Revenue (by means of offering clean, traceable product)

Vlinder has onboarded Single Malt Whiskey, Coffee, and Honey producers to the platform and helping the entire community get better recognition about their unique heritage and methods.

Vlinder is a member of GS1 USA and aligns the Trag platform with various GS1 standards.

Trag : Authentication and Traceability platform

- The Grain to Glass journey of a generic whiskey is depicted in this diagram.
- Each step in the journey is added into Vlinder's Offchain store using proprietary algorithms. This ensures that the data can not be tampered in future.
- The same data can also be residing on Blockchain using Vlinder's smart contracts providing higher degree of confidence on the data integrity.

Trag provides,

- **Dynamic Provenance Building** for a product when a particular supply chain event occurs.
- Admin dashboarding for managing the product catalogues, managing inspectors and other persona's who participate in the supplychain ecosystem, Analytics, Brand protection functionalities, User & feedback management, etc. https://azuremarketplace.microsoft.com/en-us/marketplace/apps/vlinder1661161928682.trag_provenance_1?tab=Overview
- Mobile Apps for Inspectors & Consumers to view entitled details of the products.
- APIs for Integration with different ERP Systems and Applications.
- A QR Code / NFC / RFID / Datamatrix can be enabled for each step of the supply chain for tracking.

Klefki : Blockchain-based ID and Credential platform

Klefki is a blockchain agnostic platform that enables trust, inclusion and efficiency to the ecosystem of Public and Private enterprises

Klefki Enables individuals to:

1. Own Identity
2. Accept credentials from Issuers and Store Security in mobile wallet
3. Share credentials with Verifiers by consent, on demand basis
4. Disclose selective details of credentials (Proofs) as opposed to actual sensitive data

Enables Issuers to:

1. Issue Credentials directly to Citizen's wallet
2. View list of Credentials Issued in dashboard

Enables Verifiers to:

1. Verify Credentials of Citizens directly with Citizens

Klefki adheres to key standards including but not limited to:

1. W3C standards
2. GDPR
3. India's Data Protection Bill.

Clients in Caribbean Region, Canada, and India are onboarded onto the platform issuing & verifying credentials. Advanced stage pursuits are active in Singapore, NZ & Australia regions. Implemented Use cases such as Parametric Insurance with Smart Contract, Financial Inclusion and Digital Ecosystem.

Climate-based Smart Contract:

1. **Automated Climate Resilience Solutions:** The combination of TRAG's traceability capabilities with KLEFKI's smart contract functionality enables parametric insurance solutions that automatically trigger payouts based on predefined weather events, as demonstrated in Vlinder's work with the Climate Resilience Execution Agency of Dominica. This directly aligns with BaC-SuF's need to build climate resilience for sugarcane farmers in Northern Belize.
<https://lacnet.com/parametric-insurance-blockchain/>
<https://lacchain.medium.com/vlinder-the-startup-that-enables-trust-inclusion-and-efficiency-to-the-ecosystem-across-public-30331f06dc4a>
2. **Financial Inclusion Through Transparency:** TRAG and KLEFKI together create a transparent, automated system that reduces operational costs and fraud risks in financial services, addressing key barriers to financial inclusion for smallholder farmers. This supports BaC-SuF's goal of providing 40% replanting grants and 60% financing options to vulnerable farmers.

Tokenization and Digital MarketPlace:

1. **Tokenized Agricultural Assets:** Vantr's tokenization capabilities combined with TRAG's traceability create a powerful solution for representing agricultural assets (like sugarcane fields) as digital

tokens. This enables the implementation of the "Wallet-on" tokenization system required in the EOI for digital grants and loan facilitation. <https://www.vantr.io/assets/Cr4Zs/347?cat=collectibles>

2. **Digital Marketplace Integration:** Vantr's marketplace functionality integrated with TRAG's traceability creates a comprehensive platform for connecting farmers with service providers while maintaining transparent records of all transactions. This directly addresses the EOI requirement to "develop an integrated digital marketplace linking farmers with credentialed service providers, microcredit options, and supply chain partners."

Date of Amendment

1.7. Objectives of the Consultancy (from the ToR)

Phase I: Development

- a. Conduct a contextual analysis of the existing SSC blockchain system, identifying gaps and proposing solutions.
- b. Design and develop an enhanced digital ecosystem to support effective resource allocation, project monitoring, and verification of industry transformation outputs.
- c. Integrate external data sources such as meteorological data, LIDAR, and climate vulnerability assessments.
- d. Develop a farmer credentialization system to support farmers, service providers, and stakeholders.
- e. Implement a production traceability module for end-to-end tracking of climate-smart farming practices, financing, and cane delivery.
- f. Enhance the tokenization system (Wallet-on) for digital grants and loan facilitation, ensuring access to 40% replanting grants and 60% financing options.
- g. Establish a monitoring & evaluation framework to track project progress, climate-smart practices adoption, and financial transactions.
- h. Develop an integrated digital marketplace linking farmers with credentialed service providers, microcredit options, and supply chain partners.

Phase II: Nursing and Maintenance 6

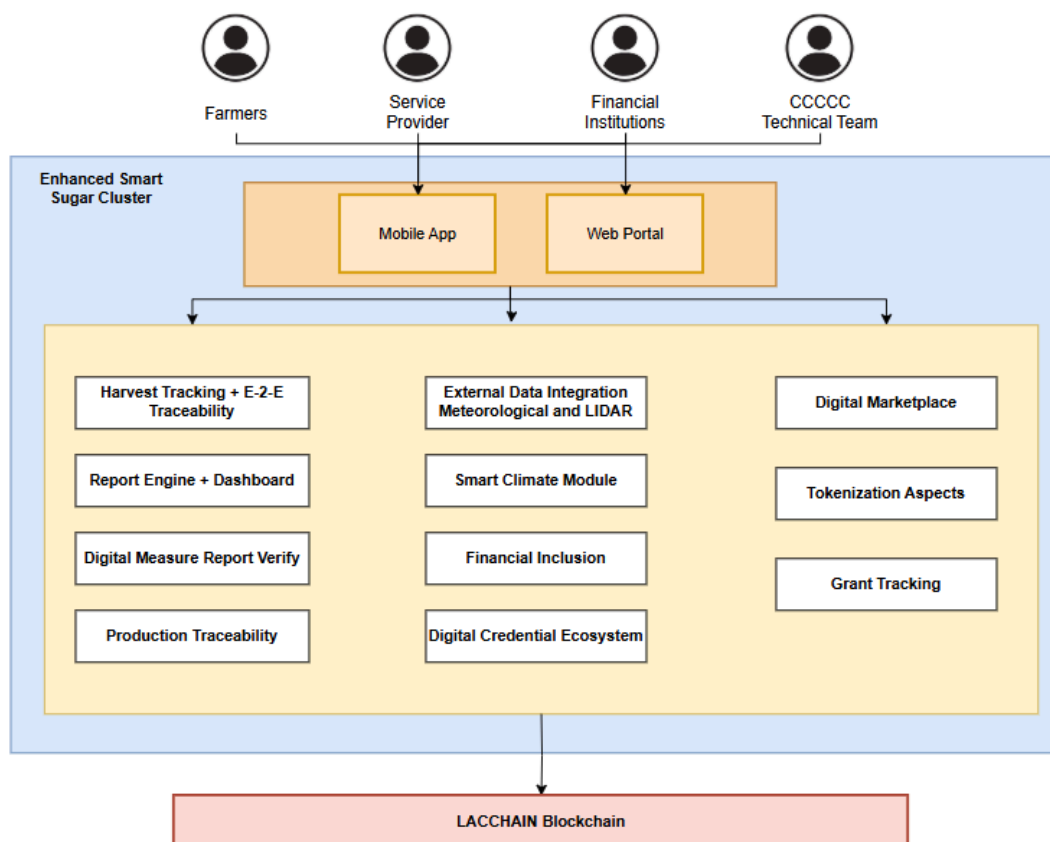

- a. Provide ongoing system support, troubleshooting, and updates.
- b. Conduct at least 10 industry-wide training sessions for farmers, service providers, and industry stakeholders.
- c. Ensure comprehensive system piloting and refinement based on user feedback.
- d. Implement a social marketing strategy to encourage adoption of the platform.
- e. Deliver a detailed User Manual for system administrators and end users.
- f. Provide technical maintenance and licensing support for at least 18 months post-deployment.
- g. Prepare a Final Consultancy Report documenting challenges, lessons learned, and recommendations for future scalability.

Deliverables

- a. **D-1 DELIVERABLE 1** Inception Report inclusive of Desk Review, Detailed Methodology and Work Plan
- b. **D-2 DELIVERABLE 2** Revised SSC Governance and Integration Assessment Report
- c. **D-3 DELIVERABLE 3** Enhanced SSC design and process flow Report
- d. **D-4 DELIVERABLE 4** Digital Marketplace design and process flow report
- e. **D-5 DELIVERABLE 5** Enhanced SSC and Marketplace prototypes
- f. **D-6 DELIVERABLE 6** Enhanced SSC and Marketplace go-live versions
- g. **D-6A DELIVERABLE 6A** SCC User Manual and Digital Marketplace Manual
- h. **D-6B DELIVERABLE 6B** Deliver at least 10 training forums
- i. **D-7 DELIVERABLE 7** Final Consultancy Report

Please note – a key step would be to understand the existing application – ability to build on and integrate. Access to code, SDK etc may be required.

We will also expect the CCCCC to assist with access to API to external interfaces.

1.8. CASE STUDIES

CASE STUDY 1. BIOREACH Project

Background: The BIOREACH project is an initiative led by the Food and Agriculture Organization (FAO) and supported by The Cropper Foundation (TCF) to address the environmental challenges of biodiversity loss and land degradation in Trinidad and Tobago. The project, funded by the Global Environment Facility (GEF), emphasizes the importance of sustainable agriculture through creating sustainable practices within Green Value Chains (GVCs).

These chains are designed to support biodiversity, enhance ecosystem resilience, and promote the sustainable use of natural resources.

BIOREACH had four key components:

- Stakeholder engagement
- The establishment of CoP (Communities of Practice) which will finalize sustainability protocols within GVC
- The development of a digital participatory guaranteed system (PGS) will ensure the adherence to sustainable practices outlined in the GVC sustainability protocols
- Knowledge management and monitoring to support and measure sustainability efforts

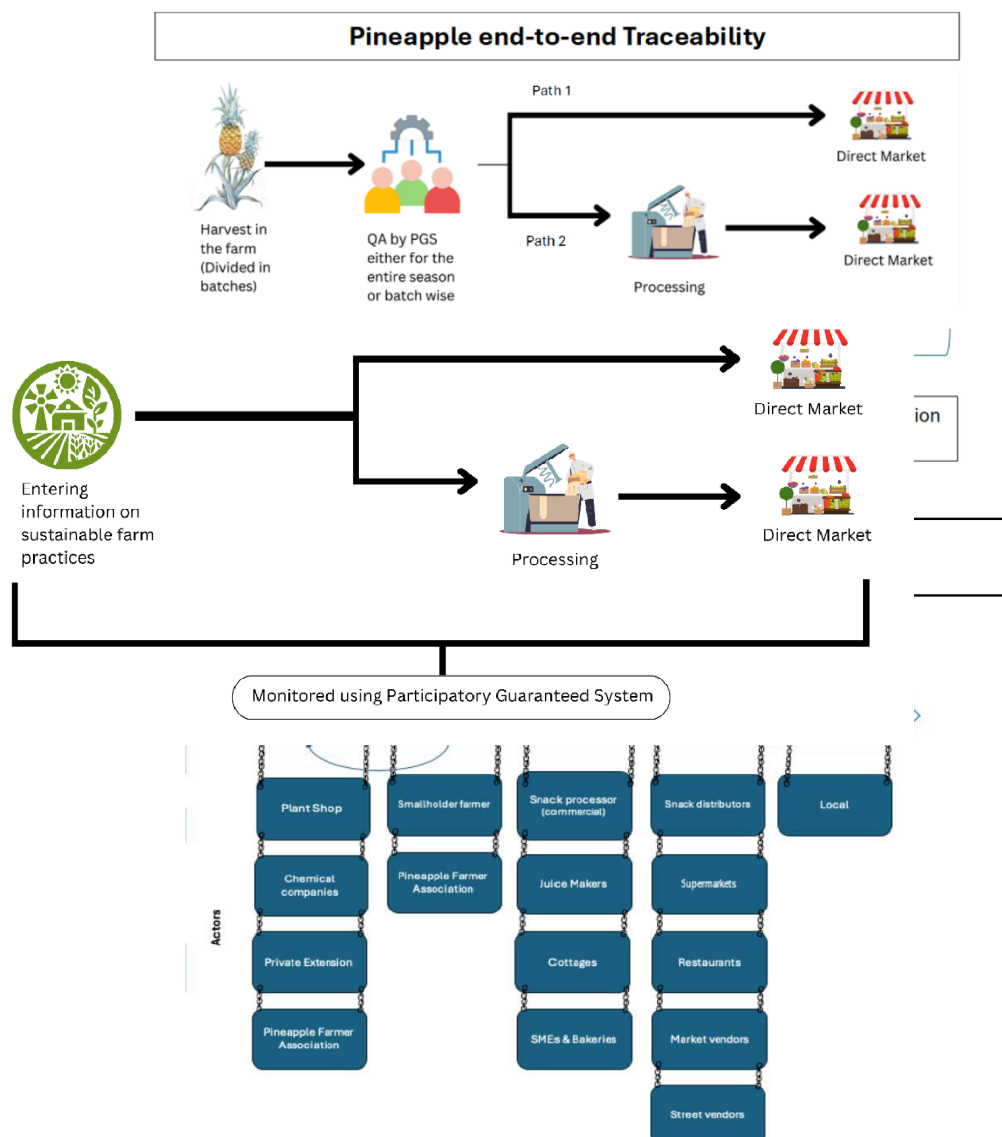

As part of these components, BIOREACH was aimed at establishing at least three public-private partnerships that support the adoption of agroecologically produced products, underscoring the role of private sector collaboration in achieving project goals. To enable transparency, accountability, and real-time monitoring, the project deploys Trag “Technology platform”. This platform is designed to trace the journey of each product along the supply chain, allowing all stakeholders—including farmers, processors, retailers, and consumers—to verify product origins, quality, and compliance with environmental standards. The platform also integrates the Participatory Guarantee System (PGS), a quality assurance mechanism that documents and verifies adherence to sustainable practices within the local context. By leveraging the platform, the BIOREACH project was aimed at providing a comprehensive digital infrastructure that facilitates data collection, tracking journey of product, analysis, and reporting. This infrastructure will not only support compliance with environmental and social governance (ESG) metrics—such as carbon footprint, water usage, and labor practices—but also enhance market access for sustainably produced goods by building consumer trust.

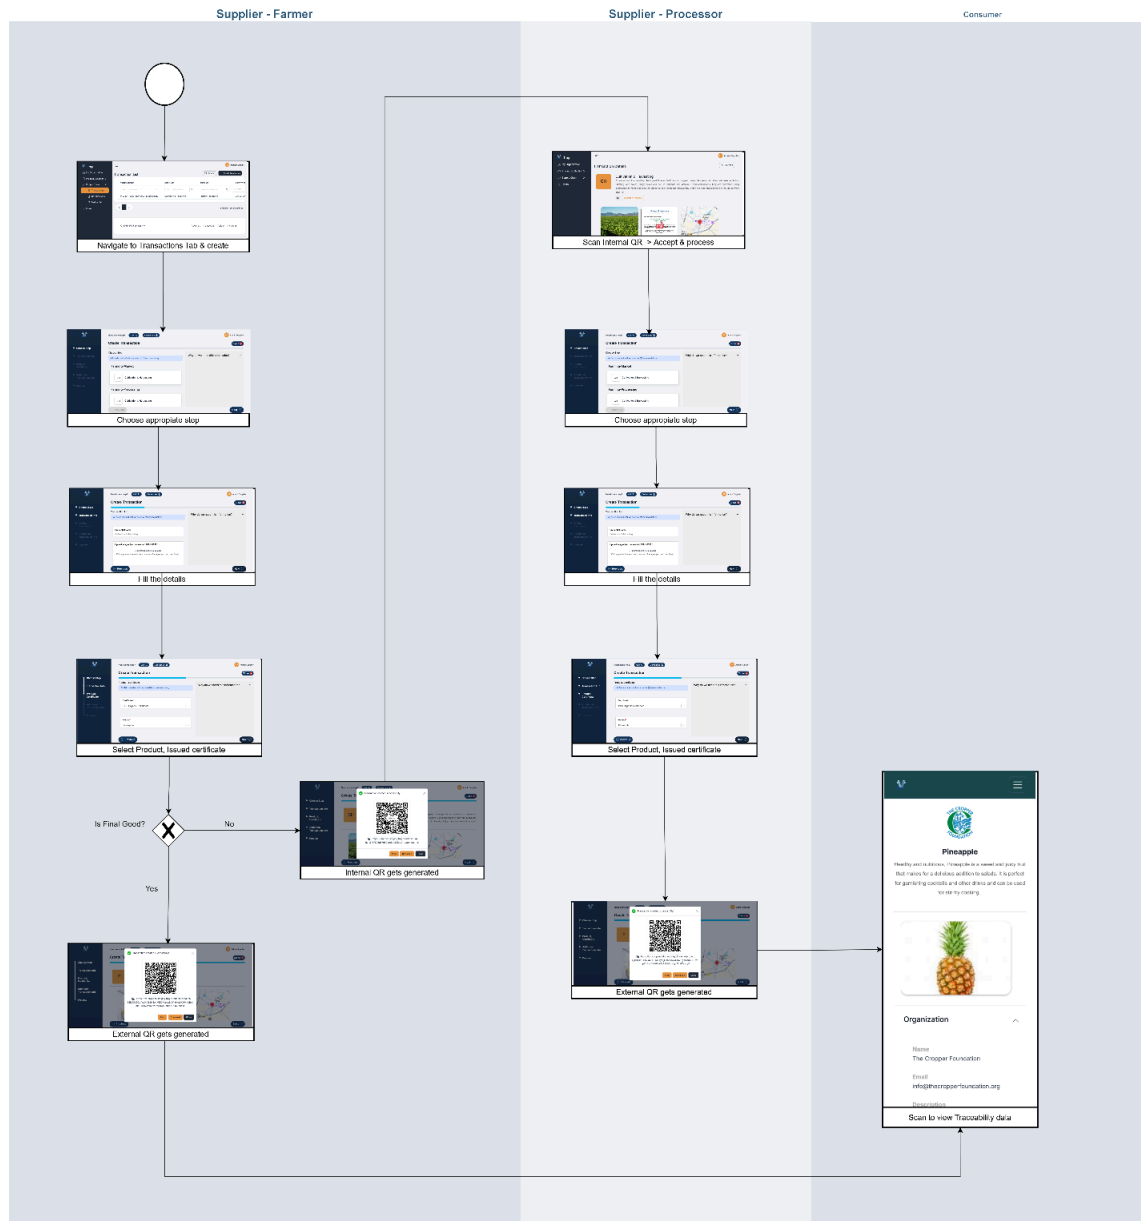

Through these efforts, BIOREACH aspires to create a model of sustainable agriculture that can be expanded across other Caribbean regions and potentially to new markets in future.

Objectives:

- Establishing the Trag (Technology Platform) for Traceability and Compliance: The objective of the project was to implement the Technology platform, a blockchain-enabled solution that establishes traceability and compliance verification across the Green Value Chain (GVC). Through real-time tracking, the Technology platform can/will support sustainable farm practices and integrate the Participatory Guarantee System (PGS) for quality assurance, ensuring that sustainably produced goods meet high standards for transparency and accountability.
- Implementing a Quality Assurance System through the Participatory Guarantee System (PGS): The project introduced and integrated the PGS within the technology platform to ensure that all products meet high standards of eco-friendly practices. The PGS will facilitate the testing and validation of sustainable practices within local farming, processing, and distribution, ensuring consistency with environmental goals.
- Promoting Environmentally Sustainable Farming Practices: Through the deployment of the technology platform, BIOREACH supports sustainable practices such as reduced pesticide and fertilizer use, efficient water management, and biodiversity preservation. The platform will enable farmers to monitor and document these practices, helping reduce their environmental impact.

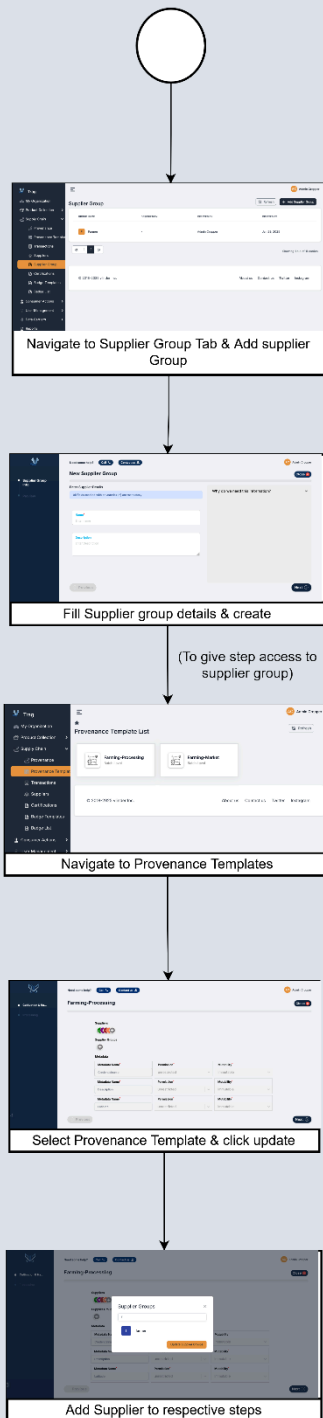

- Incorporating Environmental, Social, and Governance (ESG) Metrics: BIOREACH will monitor critical ESG metrics, including carbon footprint, water usage, soil health, and labour practices, across the GVC. These metrics will be tracked through the technology platform once data is entered by farmer(s), allowing for standardized reporting and increased accountability across the supply chain.
- Fostering Public-Private Partnerships: The project aims to establish a minimum of three partnerships between public entities and private stakeholders, such as farmers, processors, and distributors, to encourage widespread adoption of sustainable practices. These partnerships will help integrate local knowledge with international best practices and provide a foundation for scaling sustainable practices.
- Enhancing Market Access and Consumer Trust: By enabling traceability and quality assurance, the project will help open new market opportunities for sustainably produced products. The technology platform's transparency will enhance consumer trust, positioning products with clear sustainability credentials in both local and regional markets.
- Enabling Scalability and Replicability Across Regions and Products: While initially focusing on coconut, pineapple, and root crops, BIOREACH envisions the technology platform as a model for other products and regions. The flexibility and scalability of the platform make it adaptable for various agricultural contexts, supporting expansion efforts beyond Trinidad and Tobago in the future.

CASE STUDY 2. PAAMETRIC INSURANCE

Introduction

The impacts of climate change are already being felt in the Caribbean region as tropical storms and hurricanes become more frequent and more intense. This is resulting in greater damage which is causing insurance premiums to soar. As a result, many households and small businesses are choosing to forego insurance altogether. Given the need for ready cash after a storm, expanding access to affordable insurance that pays out in a timely manner is a key objective for achieving climate resilience. With traditional indemnity insurance, policies can't pay out until damage has been assessed which can cause pay-outs to be delayed by months or even years.

Diagon and Vlinder partnered with the Climate Resilience Execution Agency for Dominica (CREAD) and work together with Global Parametric to develop the parametric insurance product leveraging UiD built on blockchain technologies. We piloted it for two years offering it to the Dominica and Grenada Citizens in 2023 and again in 2024. The aim was to provide an affordable blockchain-based parametric insurance product that will help close the protection gap while extending protection to those who have been excluded by traditional insurance markets.

Solution

Parametric insurance is a form of insurance that does not indemnify losses after the fact (that is, pay based on the damage suffered), but an alternative where insurers agree to make a payment based on pre-determined metrics such as the occurrence and severity of a triggering event. One of the key features of parametric insurance is prompt claim payments. Unlike traditional indemnity insurance where payments are made upon financial quantification of the damage, parametric insurance pays out based on the occurrence only. It does not require an on-the-ground assessment. The threshold of pay-outs is designed beforehand to be approximately proportional to the losses expected to be incurred post-disaster.

The parametric insurance is a hurricane insurance based on the intensity of the hurricane and distance from the asset being insured. If a category 3, 4 or 5 hurricane passes within 100km of the coastline of Dominica, then the policyholder will be paid a predetermined amount into their mobile wallet or bank account within

72 hours of the event. For reference, the image below is a polygon with a 100km radius from the populated areas of Dominica.

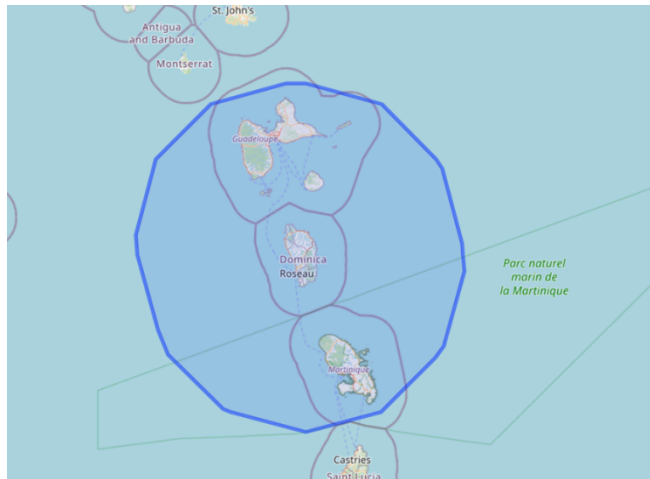

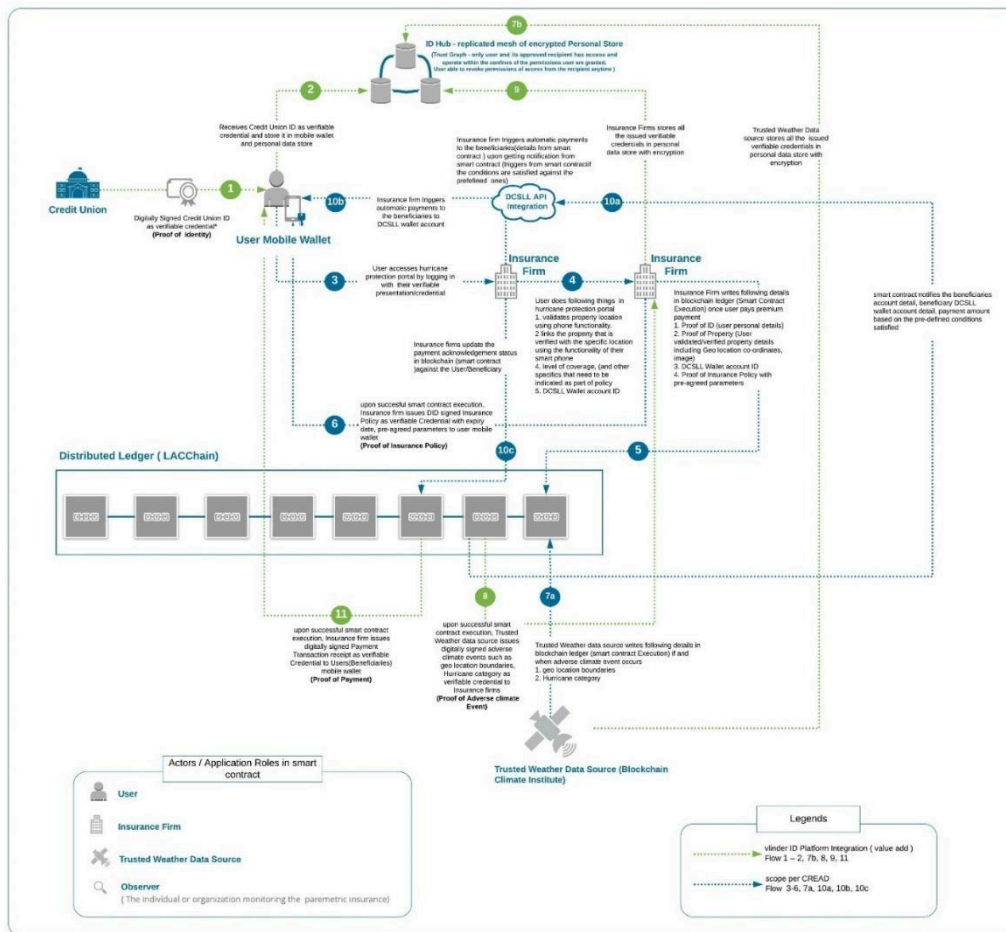

Figure 1: Proposed boundary for automated payment of blockchain-based hurricane insurance for Dominica

The Blockchain solution based Parametric Insurance underpinned by powerful technology, while being very simple and user-friendly for policyholders to use.

Blockchain solution:

Blockchain Solution Overview

The solution had a UiD at the foundational level, it worked as followed:

Proof of Identity – Credit Union issues digitally signed Credit Union ID as verifiable credential for the user.

1. User stores the verifiable credential of ID from step 1 in his/her mobile digital wallet and also stores it in personal data store (ID Hub). ID Hub is a replicated mesh of cryptographically encrypted personal data store. Only the owner of the credential can access the ID Hub and it operates within the confines of the permissions users are granted.

User accesses Hurricane Protection Portal by logging in with verifiable credentials which are already stored in the wallet.

User validates property location using phone functionality, links the property verified with the specific location using the smart phone functionality, adds level of coverage (and other specifics that need to be integrated as part of policy), updates DCSLL wallet account information.

Upon user premium payment, insurance firm writes following details in blockchain ledger:

a. Proof of ID (user detail)

- b. Proof of Property (user verified property details including Geo-location co-ordinates, images, registration record)***
- c. DCSLL wallet account details
- d. Proof of insurance policy with pre-agreed parameters

Insurance firms send digitally signed Insurance Policy with pre-agreed parameters as verifiable credential to user wallet.

- a) Trusted Weather data source writes following details in blockchain ledger if and when adverse climate event occurs.
 - Geo-location boundaries
 - Hurricane category
- b) Trusted weather data stores all the issued verifiable credential in ID Hub

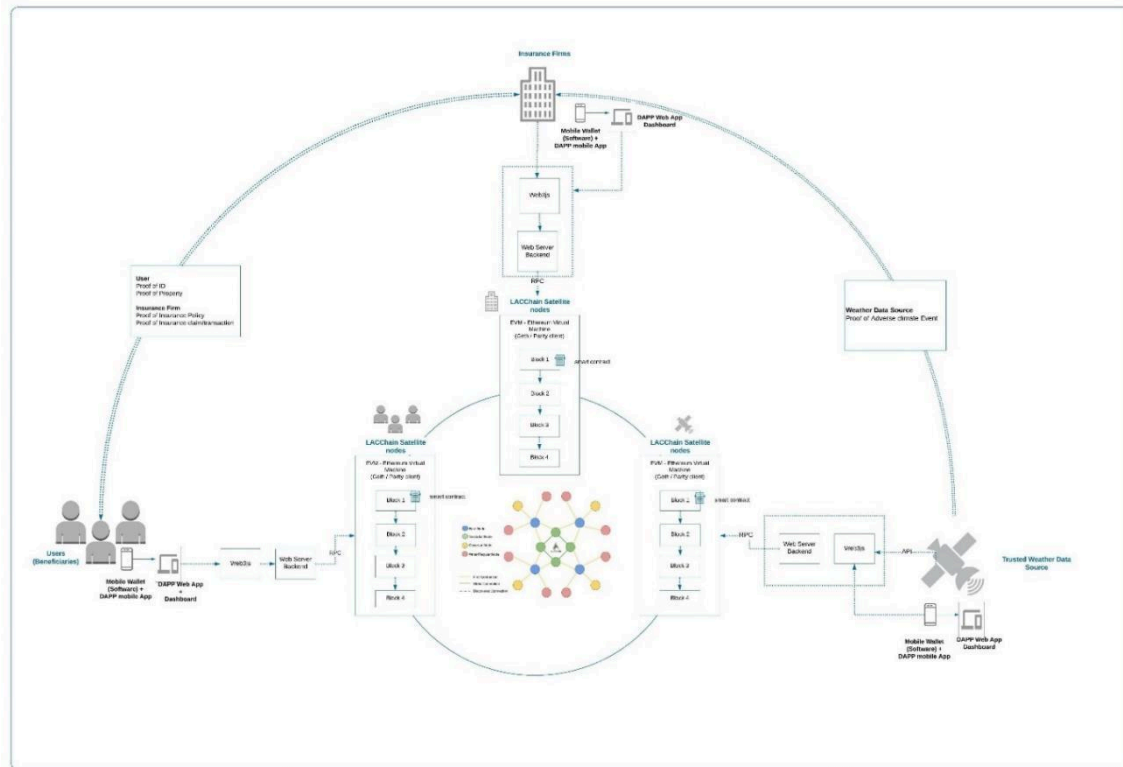

Proof of adverse climate event – Trusted Weather Data Source issues adverse climate event along with geo-location co-ordinates as verifiable credential to registered Insurance firms.

Insurance firms store all the received verifiable credentials/presentations in ID Hub.

- a) Smart contract notifies the beneficiaries details, their DCSLL wallet account details, payment details based on the pre-defined condition satisfied against the Trusted Weather data source update (geo location boundaries, hurricane category)
- b) Insurance firm auto triggers automatic payments to beneficiaries/users via DCSLL API integration.
- c) Insurance firms write payment transfer receipt status in blockchain ledger.

Insurance firms issue Proof of Payment Transaction as verifiable credential to the users/Beneficiary's digital wallet.

Node Design Proposal:

LACChain Node Design Proposal

1. Insurance firms have LACChain Satellite nodes (writer nodes and observer nodes) to write transaction (proof of insurance policy, proof of ID, proof of DSCLL wallet account, proof of payment transaction receipt) in the blockchain ledger and to read from the blockchain ledger (proof of adverse climate event).

Trusted Weather data source has LACChain satellite nodes (write nodes and observer nodes) to write transaction (smart contract – proof of adverse climate event) in the network and read from the blockchain ledger.

Smart contract auto execution kickstarts if the policy conditions are satisfied against the ones pre-defined in the blockchain ledger.

Users/beneficiaries have LACChain observer node (satellite node) to read from the blockchain ledger (his/her Proof of Policy, proof of ID, proof of DSCLL wallet account, proof of payment transaction receipt, proof of adverse climate event)

1.9. Qualifications and Experience

We will provide a more detailed list of projects at the RFP stage, if invited.

Other summaries credentials

Credential 1

Name of Client: Cropper Institute	No. of professional staff-months provided by associated Proponents 15 months
Size of Client Firm:	NA
Client's Country Location: Trinidad Location within country: POS	Duration of assignment (weeks): 6
Start date (month/year): October 2024 Completion date (month/year): march 2025	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): Brett Ramirez (Diagon) Chad Ramirez (Diagon) Malini Srinivasan
Narrative description of Project: The BIOREACH project was aimed at implementing a Technology Platform (blockchain), for traceability, transparency, and quality assurance within Trinidad and Tobago's Green Value Chains (GVCs). This platform supports sustainable agricultural practices, specifically targeting coconut, pineapple, and root tubers, with a view to expand in several critical areas. The system begins with farmers, who utilize a "web app" available via browser to input data on key sustainability metrics, such as soil health, water use, and pesticide management. Farmers can use smartphones to enter this information via browser. The solution is designed to capture the integrity of sustainable practices through an integrated verification process. Farmers initially provide input manually through templates developed by the Participatory Guarantee System (PGS), which ensure consistency in data on farm management practices. As products move through the value chain, additional data points are collected from agri-processors and other stakeholders involved in further processing or distribution. Agri-processors, who may use similar web app, input information aligned with key sustainability themes, including waste management, energy use, and processing efficiency. This structure encourages uniform data collection at each stage of the value chain, while tailored prompts and notifications guide processors in inputting relevant information, ensuring comprehensive traceability from farm to market. To strengthen the reliability of this information, the blockchain system includes a verification scale managed by the PGS and supported by the digital solution. This layer tracks, schedules, and prompts designated users within the PGS community to conduct spontaneous, physical audits. These audits, conducted by selected farmers or trusted community members, verify that the recorded practices reflect actual on-farm actions, creating a layer of peer validation. To document these audits, the web	

app supports photo uploads, allowing auditors to capture on-site images as supplementary evidence of sustainable practices.

In the future scope, as the agri-food sector integrates more Internet of Things (IoT) devices, this blockchain solution will incorporate advanced validation measures to further enhance data integrity. IoT devices, including soil sensors, weather stations, and energy meters, will provide autonomous data streams that can corroborate manually inputted information. Additionally, technical partners within the project, such as NAMDEVCO, the Ministry of Agriculture, Land, and Fisheries (MALF), and universities, will contribute verified data and insights to complement the reported practices. Data collected from these partners will add a layer of institutional credibility to the blockchain record, enhancing trust among consumers, regulators, and other stakeholders.

Consumers access the verified sustainability journey of each product through a dashboard, displayed via a QR code on the product packaging or label. By scanning the QR code, consumers can view an overview of the farm and processing sustainability practices, along with relevant contact details for the producers and processors involved.

Description of actual services provided by your staff within the assignment:

- Platform Configuration: Diagon/Vlinder built, customized and configured the blockchain Technology platform with user interfaces, data management (Geolocation, sustainability standards, PGS certifications etc), and reporting functions tailored to GVC needs. Thus, launching a fully functional digital tracking system through the entire value chain.
The Technology platform configuration includes user-friendly interfaces, data analysis capabilities, and security features. Each supply chain step—from farm to consumption—will be traced with following information:
 - Proof of origin of crop- Geo Location coordinates
 - Product details - Name, unique batch code, date, timestamp etc.
 - Sustainable practices parameters- Food safety & traceability, water footprint, land (soil testing, crop rotation etc.), Biodiversity & Nature etc.
 - Compliance and certification- Quality certificate by IICA, PGS QA certificate and following some standard compliance
- All data will be input by each participant in the ecosystem through a user-friendly interface designed for accessibility, considering that users may not have technical expertise. The interface prioritizes ease of use, with instructions and other data presented in English to ensure clarity. By consolidating data in one centralized platform, stakeholders will have access to detailed product histories, supporting comprehensive visibility and data reliability throughout the supply chain.
- Testing and Pilot Launch: Conducting pilot testing to verify functionality and gather user feedback for improvements.
- End-User Training and Engagement: Development of training materials and sessions for farmers, processors, and distributors to ensure proficient use of the Technology platform by increasing digital literacy.
- Pilot Testing and Feedback Collection: The Technology platform underwent a pilot launch to ensure reliability, with feedback informing any necessary adjustments.
- PGS Integration: The platform was integrated with the PGS to track quality assurance, document sustainable practices, and provide secure records for market verification.

Credential 2

Name of Client: Climate Resilience Execution Agency of Dominica	No. of professional staff-months provided by associated Proponents 24 months
Size of Client Firm:	NA
Client's Country Location: Dominica Location within country: Grand Bay	Duration of assignment (weeks): 24
Start date (month/year): October 2020 Completion date (month/year): May 2021	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): Brett Ramirez (Diagon) Chad Ramirez (Diagon) Malini Srinivasan
Narrative description of Project: CREAD and BCI will work together with Global Parametrics to develop the parametric insurance product, while Diagon will develop the blockchain platform. Our solution consists of three primary components: 1. The development of a parametric insurance product targeted at homeowners, small lease farmers, and micro, small, and medium sized enterprises. 2. The development of the blockchain platform to support the delivery and management of the insurance product including a DiD. 3. The development and deployment of a pilot to refine the messaging for consumers, assess the uptake of the product, ensure the pilot blockchain solution can adequately facilitate trust based automated online transactions, refine the proposition based on initial feedback, and integrate the solution with a customer-facing front-end.	
Description of actual services provided by your staff within the assignment: • Proof of Identity–Credit Union issues digitally signed Credit Union ID as verifiable credential for the user. • User stores the verifiable credential of ID from step 1) in his/her mobile digital wallet and also stores it in personal data store (ID Hub). ID Hub is a replicated mesh of cryptographically	

encrypted personal data store. Only the owner of the credential can access the ID Hub and it operates within the confines of the permissions users are granted.

- User accesses Hurricane Protection Portal(marketplace) by logging in with verifiable credentials which are already stored in the wallet.
- User validates property location using phone functionality, links the property verified with the specific location using the smart phone functionality, adds level of coverage (and other specifics that need to be integrated as part of policy), updates DCSLL wallet account information.
- Upon user premium payment, insurance firm writes following details in blockchain ledger.
- Proof of ID (user detail)
- Proof of Property (user verified property details including Geo-location co-ordinates, images, registration record).
- DCSLL wallet account details
- Proof of insurance policy with pre-agreed parameters
- Insurance firms sends digitally signed Insurance Policy with pre-agreed parameters as verifiable credential to user wallet.
- Trusted Weather data source writes following details in blockchain ledger if and when adverse climate event occurs.
- Geo-location boundaries
- Hurricane category
- Trusted weather data stores all the issued verifiable credential in ID Hub
- Proof of adverse climate event–Trusted Weather Data Source issues adverse climate event along with geo-location co-ordinates as verifiable credential to registered Insurance firms.
- Insurance firms stores all the received verifiable credentials/presentations in ID Hub.
- Smart contract notifies the beneficiaries details, their DCSLL wallet account details, payment details based on the pre-defined condition satisfied against the Trusted Weather data source update (geo location boundaries, hurricane category)
- Insurance firm auto triggers automatic payments to beneficiaries/users via DCSLL API integration.
- Insurance firms write payment transfer receipt status in blockchain ledger.
- Insurance firms issue Proof of Payment Transaction as verifiable credential to the users/Beneficiary's digital wallet.
- Social media content development

Credential 3

Name of Client: West Bengal Excise Department	No. of professional staff-months provided by associated Proponents 24 Months
Size of Client Firm:	NA
Client's Country Location: India Location within country: West Bengal	Duration of assignment (weeks): 40 weeks
Start date (month/year): Jan 2024 Completion date (month/year): Oct 2024	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): - Malini Srinivasan (Project Director) - Suresh Jagannathan (Team Leader) - Madhusudhan S (Blockchain Specialist)
Narrative description of Project: - The project aimed to implement a blockchain-based traceability system for state excise compliance in West Bengal. The solution ensures end-to-end tracking of alcoholic beverages from production to retail, enabling transparency, preventing counterfeit products, and ensuring tax compliance. The system leverages serialized QR codes and blockchain technology to automate excise duty calculations, track product movement, and provide real-time monitoring for regulatory authorities. - The solution was implemented for all registered products with a retail price exceeding ₹1200 for a 750ml pack size. Consumers can verify product authenticity via QR code scans, while subsequent scans indicate prior usage to prevent tampering or counterfeiting. Reference: https://vlinderdeveloper.wistia.com/medias/mf6rhq132s	
<u>Our Customer / Retailer App:</u> iOS: https://apps.apple.com/app/id1536485775 Android: https://play.google.com/store/apps/details?id=io.vlinder.trag	
Description of actual services provided by your staff within the assignment: Core Functionalities Implemented: QR Code-Based Serialization: - Generated unique serialized QR codes compliant with GS1 standards for each bottle. - Integrated masked QR codes into product labels to ensure authenticity and prevent tampering. Blockchain Integration: - Deployed a private permissioned blockchain network using Hyperledger Fabric.	

Implemented smart contracts to automate excise duty calculations and compliance reporting.
3. Digital Identity Management: - Issued verifiable credentials to manufacturers and retailers for secure participation in the blockchain network. - Enabled decentralized identity (DID) management for stakeholders.
4. Supply Chain Tracking: - Tracked the movement of goods from distilleries to warehouses, distributors, retailers, and consumers. - Recorded each transaction immutably on the blockchain ledger with timestamps and digital signatures.
5. Consumer Engagement: - Developed a mobile app for consumers to scan QR codes and verify product authenticity. - Displayed product journey details, including origin (geographical indication), manufacturing date, and excise compliance status.
6. Regulatory Monitoring: - Provided real-time dashboards for excise authorities to monitor production volumes, tax compliance, and supply chain activities. - Enabled audit trails for regulatory oversight and fraud detection.

Credentialial 4

Name of Client: Caribbean Telecommunication Union (CTU)	No. of professional staff-months provided by associated Proponents 18 months
Size of Client Firm:	NA
Client's Country Location: Trinidad Location within country: Port of Spain	Duration of assignment (weeks): 24
Start date (month/year): December 2018 Completion date (month/year): May 2019	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): Brett Ramirez (Diagon) Chad Ramirez (Diagon) Malini Srinivasan
Narrative description of Project:	

Between 29th April to 3rd May 2019, the Caribbean Telecommunications Union (CTU) celebrated its 30th anniversary by hosting FutureScape, an ICT-enabled borderless virtual space that fosters economic, social, and cultural integration in a futuristic digital Caribbean.

The objectives of FutureScape were to:

- Demonstrate the transformative potential of ICT in a futuristic Caribbean Single ICT Space
- Comprehensively demonstrate the benefits of collaboration by Caribbean governments in establishing the Single ICT Space.
- Encourage Caribbean Prime Ministers to commit to 21st Century Government and national and regional digital transformation.
- Prove that competing ICT services providers can be mobilized to collaborate to build the ICT Space

Description of actual services provided by your staff within the assignment:

Diagon Consulting built various technology solutions contributing to the success of FutureScape. The solution features included but not limited to:

- A web-based solution
- Issue of a DiD serving as FutureScape digital passport for each CTU FutureScape visitor and citizen. The entire platform was built on the Ethereum blockchain.
- Registration and confirmation using Facial Recognition—Issued Credential by Central Authority, i.e., CTU.
- Issued DiD enabled seamless experience for services across Virtual Country Zones (6 Countries), i.e., allowing the free movement of persons using their digital passport.
- At entry point of each virtual zone, DiD is verified (Verification of Credential)
- Within each virtual zone, (i.e., country) services were offered by "verifying DiD" (Equivalent to the Caribbean Single Market Economy – CSME).
- Security was also enabled allowing the identification of illegal immigrants.
- FutureScape laws were enforced tracking FutureScape citizens movements.
- Real-time analytic reports were generated to track the entire experience by the FutureScape citizen.

Credential 5

Name of Client: WhatsLoan	No. of professional staff-months provided by associated Proponents: 12+ Months (Ongoing)
Size of Client Firm:	FinTech with several awards from Government of India

Client's Country Location: India Location within country: Use is Entire PAN-India (Client is based in Bangalore)	Duration of assignment (weeks): 52 Weeks - Ongoing
Start date (month/year): Nov 2019 Completion date (month/year): Ongoing (At this point Products cover Financial Services and Agriculture, expanding to other Industry Segments)	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): Guruprasad UN Kaliraj Subra Manian Madhu Srinivasan
Narrative description of Project: - Digital Financial Identity on Blockchain to ease BFSI customers seeking services in India. - Digital AgriStack, Digital Identity for Farmers to ease them to seek faster and better services in India (Potential impact to 165 million Farmers) Note: Integration with Government of India Portal/API (https://digilocker.gov.in/) Both WhatLoan and Vlinder have approved Integration status with Government of India	
Description of actual services provided by your staff within the assignment: Klefki, Decentralized ID Platform is used as Digital Identity backbone for: - Digital Financial Identity for BFSI - Digital Identity for Farmers to seek Financial, Insurance and other services. Digital Identities enable 1-click KYC and other downstream services for citizens.	

Credential 6

Name of Client: Magical Experience Limited (TRIBE, BLISS, HARTS, ROGUE, LOST TRIBE, PURE)	No. of professional staff-months provided by associated Proponents 18 months
Size of Client Firm:	NA
Client's Country Location: Trinidad Location within country: Port of Spain	Duration of assignment (weeks): 32
Start date (month/year): June 2019 Completion date (month/year): February 2020	

Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): Brett Ramirez (Diagon) Chad Ramirez (Diagon) Malini Srinivasan
Narrative description of Project: As part of transforming carnival, Tribe challenged Diagon to introduce technology to Trinidad Carnival. The end result was a complete transformation of the masquerader's experience both at distribution as well as on the road. The main solution deployed was a Digital ID blockchain based for all masqueraders—over 25,000 and a portal/ marketplace for registration etc.	
Description of actual services provided by your staff within the assignment: In 2015 Diagon built the very first masquerader registration and distribution system where masqueraders can logon to a portal, register and select costumes as well as pieces a-la carte. In 2020 Diagon converted the ultimate carnival band legacy system to a fully blockchain based system using Digital ID (DiD) as its base. Other various emerging technologies were included such as IoT smart wearables hand-bands, a mobile frontend (apps) and expanded its functionality to include GPS, scheduling, distribution, and inventory tracking.	

Credential 7

Name of Client: GI Tagged	No. of professional staff-months provided by associated Proponents 8 months
Size of Client Firm:	NA
Client's Country Location: India Location within country: Karnataka	Duration of assignment (weeks): 12 weeks
Start date (month/year): April 2023 Completion date (month/year): June 2023	
Name of associated Proponents, if any:	Name of senior professional staff of your firm involved and functions performed (indicate most significant profiles such as Project Director/Coordinator, Team Leader): - Malini Srinivasan (Project Director) - Suresh Jagannathan (Team Leader) - Madhusudhan S (Blockchain Specialist)
Narrative description of Project: Onboarding of Geographical Indication products as part of Elevate Karnataka Grant- GI (State Government of India Grant). The QR codes would show 'know your product' and 'know your	

producer and origin' so end customers can determine the product's origin, longitude and latitude for the exact geographic location.

In addition to successfully implementing the 40 products, the process is being extended to more than 120+ other products.

Providing authentic information with the discount coupons increases customer trust and engagement with the GI products

Description of actual services provided by your staff within the assignment:

1. In total, the company carries 180+ GI products, out of which 40 products are chosen because they are labour-intensive and fast-moving goods like Indian spices, cereals and pulses, handlooms etc.
2. Integration of GI products with traceability and authenticity to emphasize the origin.
3. Incorporating QR codes on products to enable the product to be verified for its origin, authenticity, and traceability.
4. Creating a landing page that would encourage maximum customer engagement with the QR Code
5. The development of compliance and authentication certificates for the products to demonstrate their origin as well as engagement to the end consumer.

1.1.1 Client References

1.1.1.1 Client Reference Form 1: Ministry of Finance and the Public Services

13 Anderson Street, St. James, Trinidad and Tobago, W.I.

31/03/25

To Whom It May Concern,

Subject: Letter of Support for Diagon Consulting Limited

On behalf of The Cropper Foundation (TCF), I am pleased to provide this letter of support for Diagon Consulting Limited, who served as a key solution provider and technical partner in the development of our Digital Participatory Guarantee System (PGS). This initiative involved the development of a blockchain-enabled platform aimed at promoting agroecological practices, biodiversity conservation, and improved market access through transparent, community-driven certification. The Digital PGS was designed to support the adoption of sustainable agricultural practices by smallholder producers, while enhancing trust across value chains through traceability and decentralized verification mechanisms. Diagon Consulting played a central role in architecting and deploying the blockchain infrastructure that underpins the platform, ensuring transparency, data integrity, and interoperability with emerging Web3 ecosystems. Their scope of work also included the development of a user-friendly interface tailored to the needs of civil society organizations and producers, many of whom were new to digital technologies.

Diagon Consulting demonstrated not only technical competency in blockchain development but also an ability to translate complex technologies into contextually relevant, accessible tools. The team was instrumental in supporting stakeholder engagement, facilitating onboarding sessions, and building confidence among a diverse range of users, including grassroots producer organizations, newly start-ups Micro-Small and Medium Enterprises (MSMEs), and private sector buyers. This combination of technical excellence and user-centric design contributed significantly to the overall success of our digital PGS rollout. The Cropper Foundation continues to collaborate with Diagon Consulting on related digital initiatives and appreciates the professionalism, responsiveness, and depth of expertise that their team brings to our ongoing work. Their support has proven valuable in helping us expand our digital transformation agenda in ways that are grounded in equity, transparency, and sustainability.

We are confident that Diagon Consulting Limited is well-positioned to contribute meaningfully to future projects that seek to harness blockchain and Web3 technologies for public good.

1.1.1.2

Client Reference Form 1: Ministry of Finance and the Public Services

MINISTRY OF FINANCE
AND THE PUBLIC SERVICE

Page 2 of 2

27th March 2024

processing of new and renewal applications for work permits, CARICOM skills certificate, marriage exemptions applications, and others.

The Diagon and Vlinder team performed well, always focussing on the project objectives with an eye on exceeding the expectations of the Ministry. They were always willing to step outside of the scope to facilitate new ideas and ways of working. This is exemplified by the team setting up a Microsoft Azure environment for the MLSS as well as building additional processes that were not originally in scope of the project. The blockchain technology platform used to build the digital work permit (ePermit) has challenged the existing norms and forced the Ministry to adopt new way of working and serving citizens. This platform will allow the police, immigration department, banks and other stakeholders to verify work permits securely and easily.

If you require any further information, please feel free to contact the undersigned at rpanton@transformation.gov.jm.

Yours sincerely,

Richard Panton

Programme Manager/PMO Lead

1.1.1.3 Client Reference Form 3: Climate Resilience Execution Agency of Dominica (CREAD)

Commonwealth of Dominica

Climate Resilience
Execution Agency
for Dominica

The Palm Cottage Pavilion
P O Box 1469
Cornwall Street
Roseau
Commonwealth of Dominica
Tel: 1 767 448 4444
Email: officeadmin@creadominica.org

May 17, 2021

To whom this may concern,

The Climate Resilience Execution Agency of Dominica (CREAD) has partnered with Diagon to design, build and deliver a parametric insurance product as part of an IDB/ Compete Caribbean sponsored initiative. This product, called Flexible Hurricane Protection, represents one of the first digital insurance technology products in the Caribbean region, is the first instance of using blockchain to support the delivery of smart contracts, and is the first parametric insurance offering for retail insurance customers in the region.

At the time of drafting this reference, the pilot has been fully launched, with the technology platform fully developed and deployed, marketing campaign rolled out and policies having been being sold and issued.

The technology solution is comprised of various components, including 1) a progressive user portal that allows for onboarding and administration via a mobile app, 2) a Digital ID platform based on blockchain, and 3) an interface with a "trusted oracle" that provides information on triggering data for the supported parametric product, which is delivered through blockchain-enabled digital smart contracts. Following the pilot in two communities in Dominica, the intention is to support an island-wide rollout of the product which then has the potential to be deployed across the OECS. The project is attracting foreign investment in support of the wider deployment of this innovative solution.

There has already been significant learning, especially around the readiness of the Caribbean market for advanced financial technology solutions, which will result in improvements to the solution and the delivery approach. The Digital ID (DiD) platform is integral to the trusted nature of the product, ensures the reliability of the platform, and is a key enabler for delivering smart contracts.

The project has been a success, and the key pilot objectives have been met. Lessons learned are currently being documented, which will inform the planning for the wider commercial rollout.

We have been very satisfied with the professionalism, commercial flexibility, responsiveness, and quality of delivery from both Diagon and its partner vLinder. We believe that the parametric insurance product as well as the DiD and associated technology both offer real value for the people in the Caribbean and will be key enablers in the digital advancement of the economies in the region.

Best Regards,

Brent Barnette
Economic Growth Lead
CREAD

CARIBBEAN TELECOMMUNICATIONS UNION

4 Mary Street, St. Clair, Port of Spain 190115, Trinidad and Tobago
Tel: (868) 628-0281, 628-6359, 622-5871. Fax: (868) 622-6523 E-Mail: info@ctu.int URL: www.ctu.int

5th February 2020

TO WHOM IT MAY CONCERN

The Caribbean Telecommunications Union (CTU) commemorated its 30th Anniversary in April 2019 by staging a technology immersion event called Caribbean FutureScape, which created a futuristic Caribbean Single Market and Economy (CSME), enabled by a Single ICT Space.

Held at the Hyatt Regency in Port of Spain, Trinidad and Tobago, the objectives of Caribbean FutureScape were to:

- Create a functional representation of an ICT-enabled CSME.
- Highlight the need for and benefits of collaboration by Caribbean governments in order to establish a Caribbean Single ICT Space to support the CSME.
- Demonstrate how competing ICT service providers can be mobilised to collaborate on building a Single ICT Space.

Citizens of Caribbean FutureScape were issued a unique digital identification card (DiD) that allowed them to move freely through the five countries represented in Caribbean FutureScape. They were able to buy and sell products; establish businesses; access government services; and unlock all the benefits of citizenship in a digital, futuristic CSME.

Diagon Consulting Limited was one of the companies that worked with the CTU to build Caribbean FutureScape, providing technology solutions that enabled many digital services. Using facial recognition and an Ethereum blockchain platform, Diagon helped create a digital, paperless, cashless, seamless and fully functional environment in which citizens were able to:

- Have their identity verified and confirmed at the entry point of each country;
- Access and pay for services from the Caribbean FutureScape Governments' land registries, the Ministries of Education, Health and Finance by using their DiD;

Diagon's solution also supported:

- Enforcement of laws by enabling the tracking of citizens' activities
- Enhancement of security by allowing the identification of illegal immigrants in Caribbean FutureScape; and
- The generation of real-time analytical reports of citizens' experiences.

Diagon was a valued partner in the Caribbean FutureScape Initiative.

Bernadette Lewis
SECRETARY GENERAL

1.1.1.5 Client Reference Form 4: Successful Rollout of Parametric Insurance (Corpeff)

Corp-EFF Insurance Co.Ltd

"We Take Away The Risk, You are Insured."

October 10, 2023

To Whomsoever it may concern

This is to certify of the successful completion of **"Financial Inclusion / Parametric Insurance – Hurricane"** for the Commonwealth of Dominica and Grenada Citizens. Corp-EFF Insurance partnered with Diagon Consulting / vlinder and leveraged vlinder Inc's **blockchain platform**, klefki for the implementation. The implementation was successfully completed in May 2023.

The scope of implementation included bringing together multiple ecosystem actors (a) Our firm Corp-EFF Insurance - **Financial Services Credit Union in Dominica and Grenada** (b) Global Parametrics - **Risk Modeler/Capacity Provider** and (c) Satellite API onto a **permissioned blockchain ecosystem** (LACChain EVM) to roll out the Parametric Insurance Protection against Hurricanes.

Web URL of the implementation is: <https://corpeff-parametro.klefki.io/product/fhp>

We are pleased with the implementation and professionalism of the team and implementation of Diagon Consulting / vlinder Inc team. In case any further reference is required, please reach out to me (David Fritz, corpermanager@cwdom.dm)

Sincerely,

A handwritten signature in blue ink, appearing to be 'David Fritz', is written over a faint, circular blue line.

David Fritz

General Manager

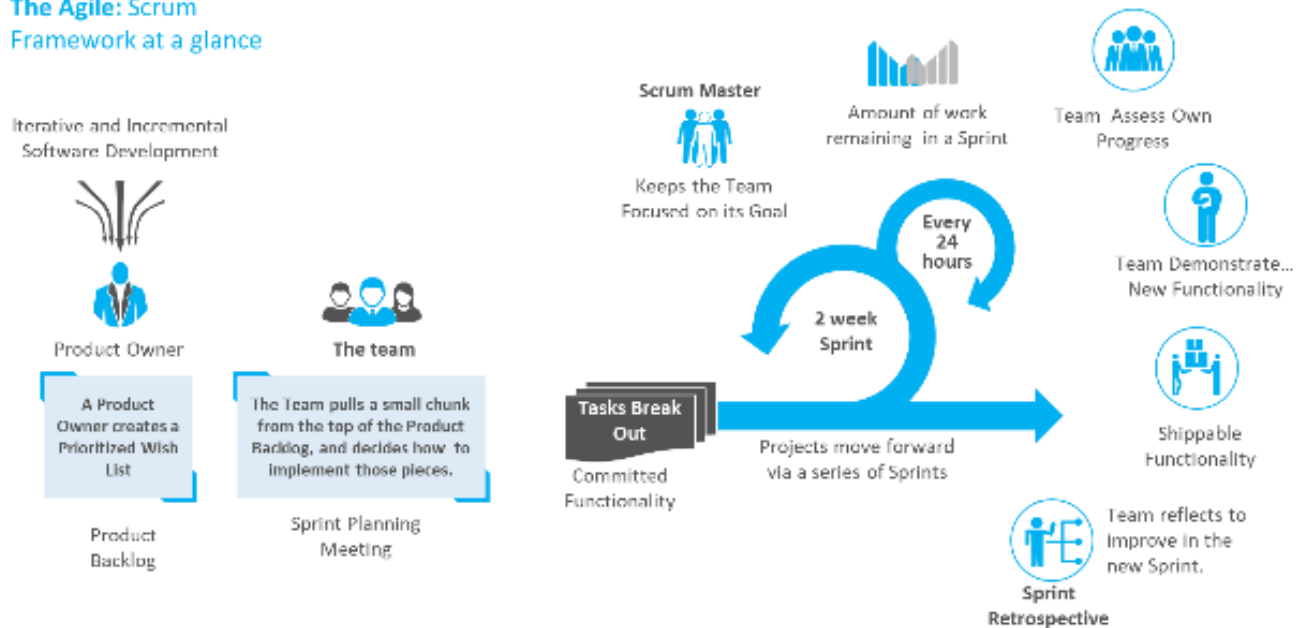

1.10. Methodology and Approach

Our methodology aligns to your deliverables.

Agile Methodology

Diagon recommends agile SCRUM methodology for the proposed project execution.

The Agile: Scrum Framework at a glance

Following are the advantages of following AGILE methodology:

- Quality of Work – which empowers everyone involved to feel good about their job
- Assumes Simplicity – way to detect and cause removal of anything that gets in the way of development
- Embracing Change – team-based approach to development for changing requirements
- Incremental changes – makes it possible using sprints, where a team is able to deliver a Minimal Viable Product (MVP) product in a 2-week duration.

Multiple sprints would be planned during the Agile development lifecycle, and each follows its own workflow.

In our experience with various clients and our expertise, we recommend adopting an **Agile model of delivery**.

Development Through Sprints

Based on the identified work products and prioritization of the work products, we will plan each sprint and prioritize the tasks for each sprint to meet the promised timelines. As needed, we will manage velocity within the sprint to meet the agreed timeline and promised work product delivery. We will be following a 2-week sprint cycle for this project and will be setting up individual milestones for every 2 sprints. We will assign an Account Manager (AM) for all accounts whose primary responsibility is to maintain the Account relationship and act as the escalation Point of Contact (POC) for the Client stakeholders. We will also assign a dedicated Project Manager (PM) who will be responsible for execution. The AM/PM combination would ensure that there is a clear communication flow between the CCCC team and our team.

The Communication Tools include **Teamwork, start meeting, and Zoom**. Project communications involve weekly, on-going sharing of information between CCCCC and our team members. Our project management plan will include a detailed Communication Plan identifying regular and formal reviews of project status against planned activities through status reports and status meetings. This includes,

- Sprint Planning
- Weekly status calls
- Sprint Delivery Meetings
- Sprint Retrospective

A project plan is a key tool we will use to identify potential schedule delays and prevent or mitigate them. Close monitoring of the plan, including resource loading, task dependencies, and milestone/deliverable progress, allow for tracking of project activities and progress, and for identifying issues before they become major problems affecting critical milestone target dates.

A typical Sprint process flow can be visualized as follows:

Pre-Development

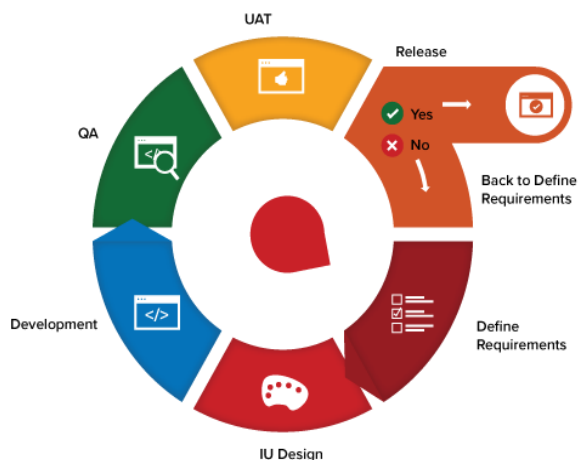

- Planning & System Architecture/High Level Design
 - Prioritize Functional Requirements
 - Identifying available resources
 - Establishing the target environment

Development

- Sprints (Concurrent Engineering) – Lasts for 15 days/2 weeks.
- Develop (Analysis, Design and Develop)
- Wrap
- Review
- Adjust

Post Development

- Closure (includes functional deliverable, sign-off, start next sprint)

For the duration of the project, while additional features may be fed into the product backlog, the rest of the process is a matter of repeating the steps over and over until all of the items in the product backlog have been fulfilled. As a result, the process flow is more of a loop and not a linear process.

A typical Sprint development includes:

- Entry Criterion
 - User Story Boards (Presentation explaining high level requirements for each Product backlog)
 - Product Backlog with Business Priorities
- SPRINT Activities
 - Organize Sprint Kick Off Meeting
 - Define Development Sprint Backlog
 - Conduct Daily Stand-Up meeting and update Tracking Sheet.
 - Compile BRD and Configuration sheets
 - Compile Test cases per Back Log
 - Perform SIT and Black Box testing
 - Release to Demo Environment
 - Present Demo to PMO/Client during Sprint Closure
- Deliverables
 - BRD and Configuration Sheets
 - Test cases and Test Results
 - Environment which will be setup to DEMO the functionalities developed as part of SPRINT.
- Exit Criterion
 - PMO Acceptance on the Demo presented by SCRUM Team.
 - PMO Sign OFF on the Demo
 - Causal Analysis

1.11. Personnel Capabilities – Candidate Summary

Sample of possible team members. We have a full team of developers, testers etc. These are just representatives

Position TBD		Candidate 🦋 ✓ Prime 🦋 Alternate	
Candidate information	Name of candidate Brett Ramirez	Date of birth 17 May 1972	
	Professional qualifications Professional Qualifications: BSc Computer Information Science M.Sc. Management Information Systems ACCA Certifications		

	RSA Archer certified including the BCM module Records Information Management (RIM) certificate, ARMA Certified Information Systems Auditor Microsoft Certified System Engineer SAP Security SAP Procurement IBM Cognos TM1 MS BI Cisco Certified Network Associate Six Sigma Green Belt Certified TOGAF9 framework AuraPortal Consultant UiPath consultant Abbyy developer Certified Business Continuity Professional (CBCP)	
Present employment	Name of Employer Diagon Consulting Limited	
	Address of Employer 16 Ruhee Street, Calcutta No 2, Freeport, Trinidad and Tobago	
	Telephone + 1 647 521 9120	Contact (manager / personnel officer) Chad Ramirez
	Fax	Email brett.ramirez@diagonconsulting.com
	Job title of candidate Director – Emerging Technologies	Years with present Employer 4 years

From	To	Company/Project/ Position/Relevant technical and management experience
2016	Present	Director – Emerging Technologies, Diagon Consulting Ltd.
2011	Present	Arcx Consulting, Canada
1998	2011	Lead IT Consulting, EY Caribbean • Led the implementation of the blockchain solution for the Crooper Foundation • Led the e-workpermit build for the Government of Jamaica • Led the eCert and Go-Green project for the Company office of Jamaica • Led the visioning and build of e-services for the CARICOM region. • Led the build and implementation of a new digitally delivered insurance product for the region. Includes customer portal, mobile technologies, DiD etc. • Delivered many presentations including DiD for the region, Neobank and Fintech for the Caribbean, Digital money, the future of robotics, the future bank for the Caribbean.

		● Currently working with a number of banks in the region to establish a digital presence. ● Co designed a vaccine passport on LACCHAIN and Ethereum using DiD. ● Led the development of a portal for a regional government re the police force. This was built on Drupal, AuraQuantic etc. Electronic signatures, SSO etc incorporated. ● Led on many OneLogin projects – MFA, SSO etc. ● Involved in a number of public sector transformational projects across the Caribbean with Ministry of National Security, Health, Education, Public Administration, Agriculture, Technology, Prime Minister’s office etc. ● Involved in a number of process improvement projects using Six Sigma aimed at increasing efficiency and effectiveness resulting in reduce cost or increase revenue (impact the bottom line positively) ● Project managed including provided quality assurance a number of system implementations for various industries – Public sector, General Insurance, Telecommunication, Manufacturing. ● Involved in a number emerging technology development projects including blockchain (with IDB), robotics, BPM, Mobile, DiD, data transformation, Data migration. ● Led a few customization projects resulting in positive customer experience as well as increased in sales ▪ Involved in a number of maturity assessment as well as seconded to remediating IT functions aligned to leading frameworks, e.g., ITIL ● Involved in robotic and Business Process Management (BPM) design and implementation projects. ● Provided quality assurance for a major development project in the entertainment industry. ● Led the development of user stories/ user requirements for a few development projects ▪ Assisted in the design and implementation of analytics platforms using machine learning algorithms. ● Led a few branch transformations for various indigenous banks in the region including the design and implementation of various off –the-shelf as well as bespoke applications, design of the operating model including sales and customer insight unit. ● Designed a couple of Enterprise Intelligence architectures (datamarts, data warehouses) for leading financial institutions. ● Led a number of financial transformations including restricting the governance structure, redefining new processes and implementation of new technologies.
--	--	--

		● Involved in a number of process improvement projects using Six Sigma aimed at increasing efficiency and effectiveness resulting in reduce cost or increase revenue (impact the bottom line positively) ▪ Project managed including provided quality assurance a number of system implementations for various industries – General Insurance; Telecommunication, Manufacturing. ● Led a number of procurement transformations related to PTP, design of the procurement operating model including shared services, inventory management, etc. ● Led the upgrade of an Oracle E-business application to version 12 – included database and operating system upgrades as well ▪ Led a number of records managements initiatives

2016	Present	Director, Diagon Consulting Limited
2009	2016	Senior / Manager / Consultant - Advisory Services, EY Caribbean Limited

		Led the development team in a e-WorkPermit system for the Government of Jamaica Led the development for a digital parametric insurance product Led for a development project re a portal for medical practitioners, insurance companies and actuaries Led the development of a blockchain traceability, ESG, PGS solution for the Crooper Institute Project lead and design for an origination and underwriting platform using BPM software. Currently leading the development team with the development of a Single Electronic Window (SEW) for a regional government. The initial processes centre on the company registry registering a company, submitting annual returns etc. Lead for various portal design and builds (entire development life cycle) for a subcontracting arrangement with a Canadian entity – clients include the government of Canada, defense services, Universities etc. Leads Diagon AuraPortal development team involved in POCs, demos, and development of solutions using AuraPortal. Lead designer for a SharePoint portal and data schema design and implementation for a regional regulator. Led the testing (unit, system, user acceptance testing) as well as project management for the delivery of Aura portal solution implementations Diagon lead designer for our mobile lead application as well as our engineer solution for the Energy sector. Implementing and integrated many robotic and intelligent document processing systems (Abbyy, UiPath) Lead designer, quality assurance manager and co-developer on an ongoing project to develop a scheduling, invoicing and reporting system for a major chemical manufacturing company. Phase one of this project involves the creation of portals for internal members of the team to dynamically create and update shipping schedules; automatically calculate and generate orders, expenses and invoices; and implement a reporting solution. Phase 2 involves creation of portals for external international entities. Designed and led the develop a registration portal for a global carnival bank which included the invoicing and payment systems as well as a fully digital
--	--	---

		distribution using mobile technologies and IoT using RFID/NFC bands and chips for payments as well as tracking trucks, masqueraders etc. Built the UI using CSS, Html 5, as well as the backend logic/ server using PHP on SQL, MySQL, MS SQL server Developed many UX using Drupal. Built a leave application using Flutter and dart. Conducted a business process review of the current operations of a department within a Ministry. The overarching aim of the review was to assess the operating model of departments' operations (structure, processes and technology) and develop recommendations and requirements for operational improvements (including the implementation of a porta) I along with an associated implementation plan. Consultant on an eight-month project to design and implement a new branch operational model in a large regional bank. This project spanned 2 countries with 3 work streams with team members from across the globe. It commenced with diagnosing the existing state of processes using Lean Six Sigma techniques and metrics with a focus on efficiency improvement; revenue enhancement; consistency of customer service delivery; assessing the current state of the IT application to support improved processes and future growth; development of a prioritized performance improvement roadmap; and training the client's project team in Lean Six Sigma continuous improvement practices. This phase was followed by the implementation of its improvement roadmap initiatives across over 10 bank branches including the development of customized software. Led the development of an engineering application using dart and flutter. Augmented reality was included as well as RFID and wearables for user and part location. Led the development of a system for a major player in the methanol industry including complex calculations based on multiple variables. Html 5, PHP, SQL server were all used. Built a number of online portals for both Life and Property insurance companies form the quotation process, to new application to claims. Various technologies were used including AuraPortal, CSS, html, JavaScript, php. Built and designed and designed a number of processes including supplier portal using AuraPortal BPM. These portals including API to ERPs such as JDE, Oracle, People, and SAP. Supplier portals for PO generation, receipts and invoicing were one such portal. Lead developer in the creation of an automated solution to re-calculate the billing amounts for the customers for a major telecommunications company. Solution involved the development of an interface for the upload of billing

Summarize professional experience over the last twenty years, in reverse chronological order. Indicate particular technical and managerial experience relevant to the project.

From	To	Company/Project/ Position/Relevant technical and management experience
	Present	Vlinder – Founder and Lead Architect Cropper Foundation Project: Designed and deployed the <i>Trag</i> platform for traceability of agroecologically produced goods in Trinidad and Tobago, integrating Participatory Guarantee System (PGS) for sustainability verification. Parametric Insurance Platform – Caribbean: Design and Lead a blockchain-enabled parametric insurance solution for climate resilience, automating payouts based on predefined weather triggers. Alco-Bev Traceability Solution – Diageo India: Implemented GS1-compliant serialization and blockchain integration to ensure product authenticity and enhance consumer trust.

		GovJ e-Work Permit System – Jamaica: Designed a blockchain-based system using <i>Klefki</i> to issue secure, verifiable digital credentials for work permits. Envisioned, designed and built domain-agnostic platform that enables storing and tracking of digital assets through the entire value chain in Ethereum. LACCHAIN blockchain Built below engines as part of the platform: - Offline build of Provenance across value chain - Reconciliation of Transactions on Blockchain - Artificial Intelligence and Analytics on data retrieved from Blockchain. - Integration of IPFS with Platform - Integration of Self-Sovereign Identity (uPort) with Platform - Integration of Ethereum Blockchain with external Ecosystem (Oracles and downstream systems) - Trag Platform, Mobile enablement of Platform on iOS and Android using React native.
February 2008	December 2017	Brown Brothers Harriman Technology Leader - Business Analytics Accountable for end-to-end Business Analytics including: a) Corporate Actions and associated Reporting for listed firms b) Fund Accounting of mutual funds associated with leading firms (e.g. Vanguard, Fidelity, Schroders, Alliance Bernstein, Citi) c) Subject matter expert for Online Cash products such as Historical Cash and Real Time Cash applications d) Liaison between Business and Technology Teams Globally across the world Other responsibilities: • Manage client relationship and expectations on multiple projects simultaneously. • business analysis, research, and testing to support key business initiatives and maintain and/or implement our client technology suite of products. • Liaison to BBH's clients / business units and technology teams to accomplish the agreed upon projects within budget and agreed upon timeframes. • Lead and participate in requirements gathering, analysis and design and approve functional specs and high-level prototype. • Participated and Presented in Leadership / SteerCo meetings. Participate in Corporate-wide systems auditing, including process control reviews and data modeling review
December 2004	October 2007	Hexaware Technologies Analytics Engineer, Analytics Lead As Analytics Lead responsible for: a) End-to-End Analytics of Business Unit Wide Analytics across various financial functions

		b) Liaison between Business and Technology c) Lead for teams spread across the globe. d) Audit/Compliance Support

TO WHOM IT MAY CONCERN

Dear Sir/Madam,

BANKER'S REFERENCE FOR: DIAGON CONSULTING LIMITED

We hereby advise that Diagon Consulting Limited has been a valued client of our Bank since June 2017.

Diagon Consulting Limited has maintained the TTD & USD deposit accounts in a very satisfactory manner. We have no hesitation in referring Diagon Consulting Limited to you and will appreciate any courtesies that may be extended to them.

Please be informed that the Bank's Commercial Services are available to the customer and would consider applications made by our customer for project financing subject to the Bank's credit criteria and lending policies.

In accordance with Bank procedure, we mention that the above statement is made without responsibility on the part of the undersigned or the Bank and is not to be construed as a Letter of Guarantee.

If you require any further details, please do not hesitate to contact the undersigned at 868-226-0224.

Yours truly,

A handwritten signature in black ink, appearing to read "Stephanie Sebastien", with a long horizontal line extending to the right.
